## Maintenance&Operation Manual

Author: ytcrane

## 目录 INDEX

<b>—</b> 、	起重机的维护保养与润滑 Maintenance and lubrication of the crane1
	(一)金属结构的检查 Metal structure of the inspection
	(二)机构的检查与维护 Institutions of inspection and maintenance
	(三)控制系统检查与电气设备的维护 Check control systems and electrical equipment maintenance
	(四)起重机的润滑 The crane lubrication
二、	起重机常见故障及处理 Common troubles and disposal
三、	起重机的使用须知 Operation notice for crane
	(一) 安全技术规则 Technical rules for crane
	(二) 司机职责 Duties of the operator

### 一、起重机的维护保养与润滑 Maintenance and lubrication of the

#### crane

为了保证起重机安全正常使用、延长零部件、元器件及起重机的使用寿命,必须对其进行经常性的检查与调整。In order to keep the crane safety and normal use, extend the service life of spare parts, components and the crane and must be frequent inspection and adjustment.

#### (一)金属结构的检查Metal structure of the inspection

桥式起重机的金属结构每年检查 1~2 次,重点为连接的松动、脱落、结构材料和焊接的开裂、桥架变形、结构件的腐蚀。金属结构的检查内容和判定标准见表 5-1 所示。Bridge crane's metal structure check  $1\sim 2$  times a year, the key for the connection is loose, fall off, structure, material and welding crack, corrosion of bridge deformation and structure. Check the content and the metal structure decision criteria are shown in table 5-1

表 5-1 金属结构检查内容与判定标准 Metal structure checking contents and standards

检查项目 test item		检查内容 test content	判定标准 judge standard
		检测主梁在起吊额定载荷时跨中的挠度,	下挠应 <s 700(以水平线为基线);旁<="" td=""></s>
		以及水平旁弯和其他变形。Detection of	弯及
	<u>→</u> 'क क प/	main girder across the deflection when	变形值应符合规定标准
	主梁变形	lifting rated load, and horizontal side	Down warping should be < S / 700
	main girder deformation	bending and other deformation.	(baseline) on a horizontal line; The
	deformation		bending and
			Deformation values should comply
			with the stipulated standards
桥架		检查金属结构件有无裂纹、腐蚀、异常变	不得有裂纹、明显腐蚀、异常变形、明
bridge		形、整体扭曲、局部失稳;	显扭曲和局部失稳;
frame		检查连接部分有无松动、脱落、裂纹、腐	不得有松动、脱落、裂纹、腐蚀。
	结构件 steel	蚀。Check whether there is any crack,	No crack, corrosion, abnormal
structure corrosion on metal structure, abnor		corrosion on metal structure, abnormal	deformation, obviously distortions and
	deformation, distortion, local instability; lo		local instability;
		Check the connection part is loose, fall	No loose, fall off, crack, corrosion.
		off, crack, corrosion.。	
		检查金属结构表面防护。Check the	不得有油漆起泡、剥落、明显锈蚀。
	其他 others	metal structure surface protection.	No paint blistering, peeling, obvious
			corrosion.
		检查有无裂纹、变形、开裂;	无裂纹、变形、开裂;
小 车	车 检查钢结构表面防护;		不得有油漆起泡、剥落、明显锈蚀;
架	结构件 steel	检查各连接有无松动、脱落。	无松动、脱落。
trolley	structure	Inspect for cracks, deformation,	No crack, deformation, cracking;
frame		cracking;	No blistering, peeling paint, obvious
		Check the steel structure surface	rust;

	protection;	No loose, fall off.
	Check the connection is loose, fall off.	
·	检查连接处母材及焊缝区有无裂纹;	无裂纹;
   司机室和主梁连排	检查螺栓等是否紧固可靠。Check the	应紧固可靠。
	connection of parent metal and weld	No crack;
cab and the main girder connection	area crack;	Should be tighten and reliable.
girder connection	Check whether such as bolt fastening	
	and reliable.	

#### (二)机构的检查与维护Institutions of inspection and maintenance

1、起升机构的检查:起升机构检查的项目内容见表 5-2,对于起升机构和运行机构相同的零部件、设备等,如电动机、联轴器、减速器、轴和轴承等的检查,可参照表 5-3 相应的项目内容及判定标准进行。 Lifting mechanism of the inspection: check the hoist content of the project are shown in table 5-2, for the lifting mechanism and working bodies of the same parts, equipment, etc, such as motor, coupling, reducer, shaft and bearing inspection, the corresponding content of the project can reference table 5-3 and decision criteria.

表 5-2 起升机构检查标准 Hoisting mechanism inspection standard

检查项目 test item		检查内容 test content	判定标准 judge standard
		检查油量是否合适,是否漏油;机架有	油量合适,不漏油;无裂纹与开裂;未漏
		无裂纹与开裂;制动瓦块是否磨损严重,	铆钉;油液无明显污染。
制动器	器	露出铆钉;油液是否清洁 Check whether	Oil quantity is appropriate, will not leak;
brake	mechanic	oil is appropriate, whether the oil spill;	No crack and craze; No leak rivets; The
DIAKE		Frame with and without crack and	oil has no obvious pollution
	Diake	craze; Whether brake segment wear	
		serious, exposed rivets; The oil is clean	
		检查有无裂缝、变形与磨损;钢丝绳固	无裂纹、无明显变形与磨损; 正常; 无脱
	卷 筒 drum	定部分有无异常;钢丝绳脱槽痕迹,卷	槽痕迹;无松动、脱落
		筒安装连接紧固 Inspect for cracks,	No crack, no obvious deformation and
		deformation and wear; Wire rope fixed	wear; Normal; Without groove marks;
		part without exception; Steel wire rope	No loose, fall off
卷筒装		groove marks, drum installed fastening	
配		connection	
drum		检查有无裂纹、变形、磨损;轴端挡板	无裂纹、明显变形与磨损; 无变形松动;
device		有无变形与松动;转动卷筒,检查轴承	无异常振动、杂音、发热;润滑良好
device	轴和轴承	有无异常杂音、发热与振动;润滑情况	No crack, obvious deformation and
	shaft and	Inspect for cracks, deformation, wear	wear; No loose deformation; No
		and tear; End baffle with and without	abnormal vibration and noise, fever;
	bearing	deformation and loose; Turn the drum,	Good lubrication
		check whether there is any abnormal	
		noise on the bearing, heat and	

		vibration; Lubrication situation	
		,	
		检查有无裂纹、缺损、磨损; 绳槽有无	无裂纹、明显变形与磨损; 无异常磨损;
		异常;有无钢丝绳脱槽痕迹;压板及定	无脱槽痕迹;无松脱
	滑轮 pulley	位销轴是否有松脱 Inspect for cracks,	No crack, obvious deformation and
		defects, wear and tear; Wire rope	wear; No abnormal wear and tear;
		without exception; Presence of steel	Without groove marks; No loose
		wire rope groove marks; If there is a	
\$日 <i>十</i> 人 // 口		loose pressure plate and positioning	
滑轮组		pin shaft	
pulley	轴及轴承绳	检查有无裂纹及磨损;润滑情况;转动	无裂纹、明显磨损; 无异常声响和质量偏
group	挡、平衡滑	滑轮,有无异常声响和回转质量偏心;	rù;
	轮等 Shaft	检查脱槽、脱落、变形、裂纹 Check the	无脱槽、脱落、变形、裂纹
	and	crack and abrasion; Lubrication	No crack, obvious wear and tear; No
	bearing	situation; Turn the pulley, with or	abnormal sound and eccentric mass;
	rope block,	without abnormal sound and rotating	No bath, peeling, deformation, crack
	balanced	mass eccentricity; Checking groove,	
	pulley, etc	peeling, deformation, crack	
	钢丝绳结构 等 Steel wire rope structure, etc.	检查钢丝绳结构、直径是否与设计相符;	与随机图完全相符;要求有2圈以上安全
		吊具在下极限位置时,检查卷筒上的安	<u> </u>
		全圈数 Check whether wire rope	Consistent with completely deliver
		structure, diameter is consistent with	graph; Request more than 2 laps safety
		design; Sling next limit position, check	strap
		security turns on the reel	
			1 个捻距内不得有 10%以上的断丝, 绳径
		结、腐蚀、弯曲、松散、磨损;高温环 	不得小于公称尺寸 93%,不得有明显缺
钢丝		境使用钢丝绳应检查结构是否正确;尾 	陷;结构应适合用途;不得有缺陷,且固
绳			定牢靠;无跳槽;不粘沙子、尘土及杂质、
steel		有无附着尘土、沙子、杂质、水分 Check	
wire	钢丝绳状态	with and without broken wires, strands	One may be more than 10% of broken
	State of	wire rope, core, kink, corrosion,	wires within the length of lay, rope
	steel wire	bending, loose, wear and tear; High	diameter shall not be less than 93%
	rope	temperature environment used wire	nominal size, no have obvious flaw;
		rope should check whether the	Structure should be suitable for use;
		structure is correct; End processing	Shall not have defects, and the fixation;
		and fixed is correct; Presence of job-hopping phenomenon; Presence of	No job; Not sticky sand, dust, moisture and impurities
		adhesive dust, sand, impurities and	and impunites
		water	
	<u> </u>	walei	

	钢丝绳安装	检查钢丝是否与结构件碰擦;与各滑轮	不得碰擦;不得有明显的磨损;压偏、松
	使用 Cable	的接触状况 Check whether the steel	散
	installation	wire brush with structural touch;	Shall not be scratches; no have obvious
		Contact with the pulley	wear and tear; Partial pressure, loose
		检查吊钩有无裂纹、变形与磨损;转动	无裂纹、明显变形与磨损;转动平稳、无
		吊钩,轴承及螺纹部位有无异常声响;	异常声响;无异常变形;润滑良好,给油
		钩口有无异常变形;轴承等润滑情况	适量
		Check whether there is any crack,	No crack, obvious deformation and
	吊钩 hook	deformation and wear on hook;	wear; Smooth rotation, no abnormal
		Rotating hook, bearing and screw parts	sound; No abnormal deformation; Good
		have abnormal sound. Hook mouth	lubrication, oil feed amount
		with or without abnormal deformation;	
		Bearing lubrication	
	葫芦板、连 接件 hoist plate and connect parts	检查葫芦板、连接件的紧固,要求无松	紧固可靠、安全,无松脱; 无变形; 功能
吊具		脱; 销、轴、侧板无变形; 钢丝绳防脱	正常且无变形;无裂纹、无磨损、变形
l hook		装置功能正常;轴承等润滑情况 Check	Reliable fastening, safety, no loose; No
device		the gourd fastening plate, fittings,	deformation; Function is normal and no
		requires no loose; Pin, shaft, side board	deformation; No crack, no wear,
		without deformation; Wire rope	deformation
		resistance devices function properly;	
		Bearing lubrication	
		所有结构与零件无变形、裂纹;转动件 所有结构与零件无变形、裂纹;转动件	无变形、裂纹;转动灵活;抓散粒物料无
	抓斗 grab	 运转灵活,斗口闭合严密,无明显磨损	  严重渗漏、磨损正常
		All structures and parts without	No deformation, crack; Flexible rotation;
		deformation, crack; Turn a flexible	Grasp the grain materials no serious
		operation; Dou mouth tightly closed, no significant wear and tear	leakage, normal wear and tear

<sup>2、</sup>桥式起重机运行机构的检查维护:桥式起重机和小车运行机构的检查项目、内容及判定标准见表 5-3。 Bridge crane operation inspection maintenance: bridge crane and the car running inspection items, contents and organization decision criteria are shown in table 5-3.

表 5—3 桥式起重机和小车运行机构检查项目、内容、判定标准

Bridge crane and the car running items, content, standards agencies to check

检查项目 test item		检查内容 test content	判定标准 judge standard
电动机	安装底座 install	安装底座有无裂纹;连接有无松动、脱落 Install	无裂纹、无松动或脱落 No
motor	base	the base crack; Connect with and without	crack, no loose or fall off

		loose, fall off	
联轴器	键和键槽 key	检查键有无松动、出槽及变形;	无松动、出槽及明显变形;
coupling	and key slot	检查键槽有无裂纹及变形	无裂纹及明显变形
		Check whether there is any looseness on	No looseness, out of the
		key, out of the slot and deformation;	groove, and obvious
		Check the keyway crack and deformation	deformation;
			No crack and deformation
			significantly
	传动轴 drive	转动联轴器、检查有无径向跳动、端面摆动	无明显径向跳动和端面摆
	shaft	Turn the coupling, check the presence of	动
		radial run out and end face run-out	No obvious radial runout
			and end face run-out
	橡胶弹性圈 buffer	检查变形与磨损程度 Check the deformation	不得超过报废极限
	ring	and degree of wear and tear	Scrap shall not exceed the
			limit
	齿 形 联 轴 器	检查润滑情况,是否漏油;	给油适当,不漏油;
	cog-wheel	是否有异常响声	无异常声响
	coupling	Check lubrication, oil;	Appropriate to oil, no leak;
		Whether there are abnormal noise	No abnormal sound
	螺栓及螺母 bolts	检查螺栓、螺母有无松动与脱落 Check the	无松动或脱落
	and nuts	bolt and nut loose and fall off	No loose or fall off
	制动器 brake	检查制动器工作情况 Check the brake	工作正常,发挥效能、不偏
		performance	磨
			Normal work, a play
			efficiency, eccentric wear
	脚踏制动器 foot	检查踏板空隙及踩下时与底板间间隙是否正	空间和间隙要适当;不得有
	brake	常,杠杆系统有无松动或错位	松动与错位 Space and
		Check with gap between floor and stepped	clearance should be
		on the pedal gap is normal, the lever system	appropriate; no loosening
制动器		with and without loosening or dislocation	and dislocation
brake	液压制动器	检查液面高度及有无漏油;	油量适当、无泄露;
	hydraulic brake	检查工作缸的功能、损伤、泄露;	动作正常,不得有损伤和泄
		检查推杆有无弯曲变形、油量、泄露	露;
		Check the liquid level height, and presence	不得有明显弯曲,油量适
		of the spill;	当,无泄露 Oil quantity is
		Check the function of the cylinder, damage	appropriate, no leakage;
		and leakage;	Movement is normal, can't
		Check whether there is any bending	have damage and
		deformation on push rod, oil, leaking	leakage; Can't have
			obvious camber,

	1	
		appropriate oil, no leakage
电磁制 动器	检查电磁铁动作情况 Check the	动作平稳,无异常噪声、无
electromagnetic	electromagnet work situation	异臭 Action is smooth, no
brake		abnormal noise, no smell
液压盘式制动器	检查油量及漏油情况,连接与紧固件安装;	油量适当,无漏油,无松动
hydraulic disk	检查液压元件和圆盘工作状态,有无非正常磨	与脱落;
brake	损和损伤	动作正确,部件不得有严重
	Check the oil and oil situation, connected	磨损或损伤
	with the fastener installation;	Appropriate oil and no oil
	Check the hydraulic components and disk	leak, no loose and fall off;
	working status, presence of abnormal wear	Action is correct, no
	and damage	obvious wear and damage,
		no loose
电磁盘制动器	检查电磁铁工作状态;检查工作件有无异常	动作平衡, 无异常噪声和异
electromagnetic	磨损与损伤,圆盘安装有无松动 Check the	臭;
disk brake	electromagnet work status; Check whether	动作正确,无明显磨损与损
	there is any abnormal wear and tear and	伤, 无松动 Balancing act, no
	damage on work piece, the disc to install	abnormal noise and odor;
	without loose	Action is correct, no
		obvious wear and damage,
		no loose
制动轮与制动瓦	检查制动轮安装有无松脱,摩擦片有无剥落、	无松动、无剥落、损伤及偏
brake wheel and	损伤及偏磨;弹簧是否老化,制动轮有无裂纹、	磨;无老化;无裂纹、损伤,
brake plate	磨损及缺损;制动间隙是否合适	磨损正常;制动间隙合乎要
	Check whether there is any loose on brake	求 No looseness, no
	wheel installation, presence of peeling and	peeling, damage and partial
	damage of lining and eccentric wear; Spring	grinding; No aging; No
	is aging, brake wheel crack and wear and	crack, damage, normal
	defects; Brake clearance	wear and tear; The brake
		clearance is required
行程和制动力矩	检查行程和制动力矩调节机构有无异常;拉	调节器适当,动作平稳;无
调节机构 Stroke	杆、销轴、杠杆及螺栓有无裂纹、弯曲变形与	裂纹、变形及明显磨损
and the braking	磨损 Check whether there is any abnormal	Regulator, appropriate
torque regulator	on stroke and the braking torque adjusting	action is smooth; No crack,
	mechanism; Rod, pin, leverage, and bolt	deformation and obvious
	bending crack, deformation and wear	wear and tear
安装螺栓、销轴	检查螺栓、螺母与销轴有无松脱	无松脱 No loose
Installation bolt,	Check for loose bolts, nuts and pin	
pin shaft		
齿轮箱体 Gear		无裂纹、明显变形与损伤;

	box body	动与脱落;油量、油品、油质;漏油	无松动与脱落;油量适当,
		Inspect for cracks, deformation and damage;	
		Installation connected to the presence of	
		loose and fall off; Oil, oil products, oil; The	
		·	
, <u>+</u> , += ==		spill	off; Oil quantity is
减速器			appropriate, no pollution;
reducer			No oil spill
	齿轮 gear	检查有无异常声响、发热和振动;齿面有无磨	无异常声响、发热、振动;
		损及损伤;轮毂、轮盘、齿轮有无裂纹,变形	无明显磨损与损伤; 无裂纹
		及损伤;键有无松动,出槽及变形;键槽有无	和变形及损伤; 无松动出槽
		裂纹与变形;轮齿接触和啮合状态有无异常;	和明显变形; 无裂纹变形;
		润滑情况	齿面接触良好,啮合深度适
		For abnormal sound, heat and vibration;	度;润滑良好
		Tooth surface for wear and damage; Wheel	No abnormal sound, heat,
		hub, wheel, gear crack, deformation and	vibration; No obvious wear
		damage; Button is loose, out of the slot and	
		deformation; Keyway crack and deformation;	
		State of gear teeth and meshing contact with	
		and without exception; Lubrication situation	obvious deformation; No
		and without exception, Eublication situation	crack deformation; Tooth
			·
			contact is good, the mesh is
			moderately depth; Good
			lubrication
	齿轮箱盖 Gear	检查有无裂纹、变形与损伤;连接与安装有无	无裂纹、明显变形与损伤;
	case cover	松脱	无松脱 No crack, obvious
		Inspect for cracks, deformation and damage;	deformation and damage;
		Connection and installation with and without	No loose
		loose	
轴 shaft	转轴、心轴、传动	检查有无变形与磨损; 传动轴是否有振摆; 键	无变形、损伤、润滑良好;
	轴 Shaft, spindle,		无异常振动、噪声和明显的
	and drive shaft	Check for deformation and wear; Shaft have	发热
		pendulum; Key and keyway looseness,	No deformation, damage,
		deformation, crack	good lubrication;
			No abnormal vibration,
			noise and heat
	滚动轴承 Rolling	   检查有无裂纹与损伤;润滑状况;检查在空	无裂纹、损伤、润滑良好;
	bearing	载和负载工况下有无异常振动、发热、噪声	无异常振动、噪声和明显的   
		Inspect for cracks and damage; Lubrication	发热
		conditions; Check whether there is any	No crack, damage, good
		abnormal vibration on under no-load and	lubrication;

轴 承		load conditions, heat, noise	No abnormal vibration,
bearing			noise and heat
	滑动轴承 Sliding	检查轴承有无磨损;	无明显磨损;
	bearing	在空载和负载工况下是否烧损与发热	不得有烧损或明显温升陡变
		Check whether there is any wear on	No significant wear and
		bearings;	tear;
		Under no-load and load conditions are	Can't have damage or
		burning with fever	obvious abrupt change of
			temperature
车轮组	轮缘 rim	检查有无裂纹、缺蚀、变形、磨损	无明显、缺蚀、明显变形、
wheel		Inspect for cracks, corrosion, deformation,	   磨损
group		wear and tear	No obvious, lack of the
			corrosion, obvious
			deformation, wear and
			tear
	车轮踏面 Wheel	检查踏面有无磨损; 主动车轮以及从动车轮直	—————————————————————————————————————
	tread	 径误差;检查裂纹、变形、踏面表面剥落 Check	 符合相应标准;无裂纹与变
		whether there is any wear on tread; Driving	
		wheel and driven wheel diameter error;	·
		Check the surface crack, deformation, tread	
		spalling	values should comply with
		- Parining	the relevant standards; No
			crack and deformation; No
			peeling off
	 轮 毂 内 轴 承	 检查滑动轴承的润滑情况;	无异常
		[ <sup>12]</sup> 空载和负载工况时的异常振动、噪音、温升;	No abnormalities
	bearing	检查滚动轴承的润滑情况、振动、噪音、温升,	140 abnormanaes
	bearing	等	
		Check the lubrication condition of sliding	
		bearing;	
		Non-load and load conditions when	
		abnormal vibration, noise, temperature rise;	
		Check the lubrication condition of rolling	
	大协协机厂训练	bearings, vibration, noise, temperature, etc	工麻椒 麻坦 克壮克权
	车轮轮毂与端梁	检查有无摩擦、磨损;装配精度	无摩擦、磨损; 安装良好   Without friction wood and
	侧板之间的贴板	For friction, wear and tear; Assembly	Without friction, wear and
	The wheel hub	precision	tear; Install the good
	and end beam		
	strap between		
	the side panel		

#### 3、轨道的检查 Track inspection

起重机和小车的轨道,每年必须检查 2~4 次,轨道是起重机或小车平稳运行的基础,随着起重机运行时产生的冲击和振动,可能引起轨道安装的松动,连接件脱落、变形裂纹、精度指标超差,这些缺陷反过来又影响起重机或小车的正常运行。通过检查和调整,可以为保证起重机的正常运行提供条件,轨道检查项目、内容见表 5—4。Crane and trolley track, must check 2~4 times a year, the railway is the foundation of the crane or trolley running smoothly, as the runtime impact and vibration of the crane may cause loose track installation, fitting, deformation cracks, precision index super bad, these defects, in turn, affect the normal operation of the crane or trolley. Through inspection and adjustment, can provide conditions for guaranteeing the normal operation of the crane, rail inspection project; contents are shown in table 5-4.

表 5—4 轨道检查项目、内容及判定标准

The items, contents and standards track inspection

检查项目 test item		检查内容 test content	判定标准 judge standard
	钢轨 rail	检查有无裂纹、头部下陷、变形、侧面磨损	无裂纹、明显下陷、变形及严重磨损
		Inspect for cracks, subsidence,	No cracks, subsidence, distortion
		deformation, flank wear head	and serious wear and tear
	钢轨紧固螺	检查连接螺栓有无松动及脱落 Check the	不得有松动与脱落 Shall not be loose
	栓 Rail	connection bolts loose and fall off	and fall off
	fastening		
	bolt		
	连接板及垫	检查螺栓有无松动、脱落;连接板和垫板有	无松动脱落; 不得有移位、缺陷及脱落
	板	无移位、缺陷或脱落Check the bolts loose,	No loose fall off; Can't have shift,
轨 道	Connection	fall off; Connection plate and the plate have	defects and fall off
rail	plate and	no shift, defect or loss	
	the plate		
	缓冲器及车	检查有无损伤及错位;安装有无松动、脱落	无损伤、错位;无松动、脱落 No
	挡	Inspect for damage and dislocation; Install	damage and dislocation; No loose,
Buffer and		any loose, fall off	fall off
	car blocking		
	钢轨接头	检查钢轨接头有无错位及间隙变化 Check	不得有明显错位及间隙变化 Can not
	Rail joint	whether there is any mismatch on rail joint	have obvious dislocation and
		and clearance	clearance changes
	钢轨焊接安	检查焊缝有无裂纹与开裂 Check weld crack	不得有裂纹、开裂 Can not have crack,
	装 The rail	and craze	crack
	welding		
	installation		
	几何尺寸误	检查轨距、轨道中心线、轨顶高等偏差Check	各偏差不超过规范规定值 The
	差	the center-line and rail gauge, rail top higher	deviation is less than specification
	Geometry	deviation	specified value

error	

- (三)控制系统检查与电气设备的维护Check control systems and electrical equipment maintenance
- 1、供电、电气元器件及控制系统的检查 Check power supply, electrical components and control system

桥式起重机的供电装置、驱动装置、电气元器件、控制及操纵系统的检查项目,内容见表 5.5。

Bridge crane power supply device, driving device, electrical components, control and control system of project examination, the content shown in table 5.5.

表 5.5 起重机电气、控制系统检查项目、内容及判定标准
Crane electrical items, contents and standards, control system check

Crane electrical items, contents and standards, control system check				
检查项目 test item			检查内容 test content	判定标准 judge standard
	绕组 winding		检查绝缘电阻;有无发热 Check	绝缘电阻在规定范围; 无异
			the insulation resistance;	常 发 热 Insulation
			Presence of heat	resistance within the
				prescribed scope; No
				abnormal fever
电	轴承 shaft		检查润滑情况与异常响声	润滑良好和无异常声响
动			Check the lubrication condition	Good lubrication and no
机			and abnormal noise	abnormal sound
Motor	滑环 slide rin	ng	检查有无变色、裂痕,接线头有	无明显变色、伤痕、破裂或
			无松动 check for color, cracks,	松动 No obvious color
			loose wiring head	change, wounds, broken
				or loose
	电刷及导线	electric brush	检查有无磨损和松动;压力;附	无明显磨损、松动; 压力适
	and conduct line		着碳粉;	当;无附着碳粉;无火花
			转动电机轴有无松脱	No obvious wear and
			Inspect for wear and loose;	loose; Appropriate
			Pressure; Attached carbon	pressure; No attached
			powder; Turn the motor shaft	carbon powder; No spark
			with and without loose	
集	滑线	电源滑线、	检查有无变形、磨损、损伤; 张	无明显变形、磨损、损伤;
电	及滑	集电轨道	紧装置动作是否正常; 滑线与滑	张紧力正常;
装	车轨道	power slide	块的接触情况; 绝缘子支承有无	接触良好; 无松脱
置	Slide and	wire and	松脱 For deformation, wear and	No obvious deformation,
current	The rails	current collect	damage; Tensioning device is	wear and damage;
collect	rail		normal; Sliding contact with the	Tension is normal;
device			slide block; Insulator	Good contact; No loose
			supporting any loose	
			ı	

	売、盖、罩子	检查有无损伤与变形; 防触电装	无损伤与明显变形; 与滑线
	covers	置是否正常 Inspect for damage	有足够间距
		and deformation; Prevent to	No damage and
		get an electric shock device is	deformation obviously;
		normal	With slide wire have
			enough spacing
	绝缘集电器	检查绝缘集电器的接线有无异	电缆心线、接头及外壳要可
	Insulation	常 Check whether there is any	靠连接
	collector	abnormal on the electrical	Cable core wire,
		wiring insulation set	connector and shell to
			reliable connection
	绝 缘 子	检查有无脱落与松动、破裂与污	无脱落、松动、破裂与污垢
	insulator	垢 Inspect for peeling and	No fall off, loose, broken
		loose, broken and dirt	and dirt
	机械部分	检查有无磨损与损伤; 润滑是否	无明显磨损、损伤;润滑良
	Mechanical	良好 Inspect for wear and	好
	parts	damage; Lubrication are in	No obvious wear and
		good condition	damage; Good lubrication
	弹簧 spring	检查有无变形、腐蚀及疲劳损伤	无变形、无明显腐蚀及疲劳
		检查磨损和损伤;润滑是否良好	损伤 No deformation, no
			obvious corrosion and
集电器			fatigue damage
collector	接线与绝缘	检查接线有无断线, 绝缘子是否	无断线或破损、污秽
	line	破损、污秽 Presence of bolt,	No break or damage and
	connection	check wiring insulator is	pollution
	and insulation	damaged, defiled	
	接头螺栓	检查紧固部分有无松动脱落	无松动脱落 No loose fall

#### 2、电气设备的维护 Electrical equipment maintenance

建立电气检修制度,各种检修周期的规定按起重机的工作级别及环境条件而定,以下所列各种检修制度系指一般情况而言。Build electrical maintenance system to make all kinds of the provisions of the repair cycle according to the working level of crane and environmental conditions, the following listed various maintenance system refers to the general case.

日检修—由起重机司机每日交接班时进行。检修范围如下: Daily maintenance is carried out by crane driver in daily shift changes. Maintenance scope is as follows

清除电气设备外部的灰尘、污泥及油类等附着物,用手探测电动机、电磁铁、控制器触头、电阻器等发热情况,检查轴承有无漏油现象,主要设备的电线接头是否紧密,在打开观察孔盖或外壳时,应防止灰尘、铁屑等侵入线包内部。将观察所得的各种特殊情况记录下来。Clean electrical equipment external attachments such as dust, dirt and oil, with the hand contact detection of motor, solenoid, controller, resistor, such as heating situations, check the bearing without oil leakage phenomenon, the main equipment of the wire connection is tight, when open access plate or shell, should prevent such as dust, iron wire inside the package. Record the observation results.

旬日检修(或双周检查)—由电气工作人员执行, 司机也需要参加。检修范围如下: Ten days check (or double week check) - performed by electrical worker and drivers also need to attend. Maintenance scope is as follows

清除各电气设备内部的灰尘、污泥等附着物。观察电动机的刷架、炭刷滑环等磨损情况,电动机、电磁铁、继电器及电磁开头等在运行时所发出的音响是否正常, 检查并修理控制器与开关的触头。To clear the dust, sludge and other attached objects inside the electrical equipment. Observe the motor brush frame, carbon brushes, slip ring and wear motor and electromagnet, electromagnetic relay and the beginning at run time whether the sound made by normal, check and repair the controller and contactor of the switch.

年检修或大修由电气工作人员执行,检修范围如下: Years of maintenance or repair carried out by electrical workers, maintenance scope is as follows

拆开各项电气设备进行清理,检修各项设备的支架,洗净电动机的滚动轴承并另换新润滑脂,测量定子与转子间空隙,如发现不均匀时需要更换滚动轴承。测量绝缘电阻,必要时进行干燥,各种缺陷在年修时应全部修好,无法修理的部件应该更换,年修或大修范围均由各项设备实际磨损与陈旧程度来决定。 Disassemble all the electrical equipment to clean and repair the equipment supporting frames; wash the rolling bearing of the motor and the other new grease, measure the gap between the stator and rotor, such as uneven found need to be replaced when the rolling bearing. Measuring insulation resistance, dry, and when necessary the various defects should be repaired all in years, and can't repair parts should be replaced, repair or overhaul range are determined by the actual wear and the degree of the old equipment.

在起重机上必须备有而且只允许用干式灭火器。最常用的为四氯化碳灭火器,不允许使用泡沫灭火器,干沙只能用来扑灭导线的着火,而不能用来扑灭电动机的着火。On the crane must be equipped with and only allowed with dry fire extinguisher. The most commonly used for carbon tetrachloride fire extinguisher, are not allowed to use foam extinguisher, dry sand can only be used to put out the fire of the wire, and cannot be used to put out the fire of the motor.

当发生火灾时,首先应该设法切断电源,此时用紧急开关或保护盘上的刀闸开头来切断电源。当保护盘前面的导线着火时,应切断馈电线上的刀闸开关。When there is a fire, first of all, should try to cut off power supply, this time with an emergency switch or breaker plate on the beginning of protection to cut off power supply. When the wires in front of protection plate were caught on fire, workers should cut off the breaker switch feeders.

着过火的起重机要经过清擦、干燥与检查所有电气设备及电气布线,修复合格以后才能再用。The burnt crane should be made dry and check that all electrical equipment and electrical wiring, repair qualified, then the machine can be used again in the future.

#### (四)起重机的润滑The crane lubrication

起重机设备润滑情况的好坏直接影响起重机各机构的正常运转,凡是有轴、孔配合的部位和有相对运动磨擦的机械部位都要进行定期润滑,因此,使用和维修人员必须经常检查各润滑点的润滑情况,按时给各润滑点加油,根据用户的需求,其润滑有分点润滑和集中润滑,一般情况下≤75t 采用分散润滑,>75t 一般宜采用集中润滑。Crane equipment lubrication situation directly affects the normal operation of crane agencies, where the shaft friction, hole with the location and relative motion of mechanical parts should be lubricated regularly, therefore, the use and maintenance personnel must be regularly check the lubrication condition of all lubricating points, all lubricating points on time to support him, according to the needs of users, the equinoctial lubrication and centralized lubrication, typically 75 or less t adopt dispersing lubrication, > 75 t appropriate USES centralized lubrication in general.

- 1、起重设备各润滑点分布 Hoisting equipment all lubricating points distribution
- ①吊钩轴两端及吊钩螺母下的推力轴承 Hooks on both ends of the shaft and hook the thrust bearing under the nut
  - ②固定滑轮轴(在小车架上)Fixed sliding shaft (on the trolley)
  - ③钢丝绳 Steel wire
  - 4 各减速器 Each reducer
  - ⑤齿轮联轴器 Gear coupling
  - ⑥各轴承座(包括车轮组及轴承箱)The bearing seat (including the wheel group and the bearing box)

- ⑦电动机轴承 Motor bearing
- ⑧制动器各铰点 Brake each hinge point
- ⑨抓斗的上下滑轮轴、导向滚轮 Grab the drop shaft, guide roller
- ⑩电缆导电中滑车的轴承 Cable of the conductive block in the bearing
- 2、润滑条件与润滑材料 Lubrication condition and lubrication materials

起重设备必须采用合适的润滑油脂,定期润滑和及时更换,润滑装置和各润滑点必须保持清洁,表 5-6 是各机构主要零部件润滑时间的一般规定和推荐用的润滑材料。Lifting equipment adopts appropriate lubricating oil, lubricated and timely replacement, lubrication device and the lubrication points must be kept clean, table 5-6 is the major parts of the body lubrication time general provisions and the recommended lubrication materials.

表 5-6 典型零部件的润滑材料及其润滑周期

Typical components of the lubrication materials and lubrication cycle

序 号 No.	零部件名 称 Name of spare parts	润滑周期 lubrication cycle	润滑条件 lubrication condition	润滑材料 lubrication material
1	钢 丝 绳	一般 15~30 天一次,根		丝绳麻心脂 Wire rope
'				
	steel wire	据实际使用中的润滑情况	100 漫涂至饱和为止;	hemp hearts fat
		而定	不加热涂抹	(SH0388-1992);
		15-30 days one time for	Heat the grease to	石墨钙基润滑脂 Graphite
		one piece depends on	50-100 $^{\circ}$ C to full, don't	calcium base grease
		the situation	daub heating	
2	减速器	使用初期每季换一次,以	油池飞溅润滑;	L-CKC100、L-CKC150、
	reducer	后可根据油的清洁情况半	循环喷油润滑	L-CKC220
		年至一年换一次	Splash lubrication oil	按减速器说明书要求
		Using quarterly in early	pool;	according to the reducer
		time, in one time	Circulating oil lubrication	instruction
		according to the cleaning		
		of oil situation after six		
		months to one year		
3	开式齿轮	半月一次,每季或半年清		明齿轮脂 gear grease
	open type	洗一次 a half months		(HG1-26-73)
	gear	one time, clean in season		
		or half an year		
4	齿轮联轴	每月一次 once per month	工作温度在-20~120 %C	通用锂基润滑脂 general
	器 gear		低于-20 ℃	lithium base grease 1, 2,
	coupling		Working temperature	3号(GB7624-1994);

5	滚动轴承	3~6 个月一次 3-6	is-20∼120°C;	54 号低温润滑脂 Low
	rolling	months one time	Below -20℃	temperature grease
	bearing			(SH0385-1992)
6	滑动轴承	酌情 depends		
	sliding			
	bearing			
7	卷筒内齿	大修时加油 add oil when		
	盘 gear	overhaul		
	disk in			
	drum			
8	电 动 机	年修或大修 annual repair	一般电动机;	3 号锂基润滑脂
	motor	or overhaul	H 级绝缘和湿热地带	(GB7324-1994);
			Normal motor	复合铝基润滑脂
			H degree insulation and	(SH/T0378-1992) '
			hot and humid area	No. 3, lithium base grease
				Composite aluminum base
				grease (SH/T0378-1992)
9	制动器各铰	每月一次 once per		工业用锂基润滑脂
	点 each	month		Industrial lithium base
	brake point			grease

- 3、润滑注意事项 Lubrication points for attention
- ①润滑材料必须保持清洁。Lubrication materials should be kept clean
- ②不同牌号的润滑脂,不可混合使用。Do not mix up different type of grease.
- ③经常检查润滑系统的密封情况。Check the sealing of the lubrication system.
- ④选用适宜的润滑材料和按规定添加润滑脂的时间,进行润滑工作。Choose appropriate materials and in accordance with the provisions, add the time of the grease lubrication, lubrication.
- ⑤应用压力注脂法(油枪或油泵)添加润滑脂较好,尽量避免用涂沫方法添加润滑脂。因润滑脂不易进到磨擦面上,必要时应设法把润滑脂推送到磨擦面上。Use pressure greasing technique (oil gun or pump) add grease is better, as far as possible avoid using add grease coating spray method. Because the grease is not easy to into the friction surface, if necessary, should be managed to push grease to the friction on the surface.
- ⑥只有在起重机完全断电时,才允许进行润滑操作(电动干油集中润滑除外)Only in the crane power off in full, allowing for lubrication operation (except dry electric centralized lubrication oil)
  - ⑦应保证管路不被挤、压、碰伤。Shall ensure that piping is not squeezed, pressure, and bruising.
- ⑧需要拆卸管路时,必须将管端或连接处防护好,以免碰伤或混入机械杂质,重新安装时,要认真清除接头处的污垢,确保油路清洁。When it is needed to remove the piping, pipe or joint protection must be good, in order to avoid bruising or mixed with mechanical impurities, reinstall, carefully remove dirt, joint to ensure that the oil clean.
- ⑨潮湿地区不宜选用钠基润滑脂,因其吸水性强,易失效。It is not suggested to choose sodium base grease in damp areas. Because of its water imbibition is strong, it is easy to fail.

⑩各机构没有注脂点的转动部位,应定期用稀油点注在各转动部位缝隙中,以减少机件的磨损和防止锈蚀。It should be regularly use single point injection in the rotating parts gap in order to reduce the wear parts and prevent corrosion when institutions do not on the rotational position of the point.

- ①润滑点润滑时,应适当转动以使润滑脂均匀分布。 Make appropriate rotation so that the grease evenly distributed lubrication points.
- ①各种润滑油料等如未达到规定更换间隔时间,已发现受污或变质时,并应予以立即更换。All kinds of lubrication oil such as do not meet the specified time interval of replacement, have been found contaminated or deterioration, and should be replaced immediately.

### 二、起重机常见故障及处理 Common troubles and disposal

起重机械在使用过程中,机械零部件、电气控制和液压系统的元器件,不可避免地发生老化、磨损,并引发故障,导致同一故障的原因可能不是一一对应的关系。因此要对故障进行认真分析,准确地查找真正的故障原因,并采取相应的消除故障的方法来排除。从而恢复故障点的技术性能,以下为桥式起重机常见故障及处理。

With the using of crane, machine parts, electric control and hydraulic pressure system parts would inevitably have abrasion or damage. And one fault maybe caused by a lot of things, so we should carefully analyze and eliminate the fault accordingly. The followings are the main faults and the methods.

1、金属结构部分故障(表 6-1) Fault of steel structure (Table 6-1)

#### 表 6-1 金属结构部分故障

Table 6-1 Fault of steel structure

	T	1
故障名称	故障原因	排除方法
Fault	Causes	Eliminating Method
主梁腹板或盖板		裂纹不大于 0.1mm 的,可用砂轮将其磨平,
发生疲劳裂纹	长期超载使用	对于较大的裂纹,可在裂纹两端钻大于¢8
Fatigue crack of	Overload for long time	的小孔,然后沿裂纹两侧开 60°的坡口,进
main web plate		行补焊。重要受力构件部分应用加强板补
and cover plate		焊,以保证其强度。When crack is less than
		0.1mm, use grinding wheel grinds it. For
		bigger crack, drill $\emptyset$ 8 hole at each side of
		the crack and open 60° on both sides of the
		groove, and weld.
主梁腹板有波浪	超负荷使用,使腹板局部失稳	采取火焰矫正,消除变形,锤击消去内应力,
形变形	Overload makes part lose balance.	严禁超负荷使用。
Wave-like		Rectify with fire, remove distortion, eliminate
distortion of main		internal stress with hammer, and strictly

web plate		prohibit overload operation.
→ \$0\ <del>\$\</del> \ a\s\ a\s\ a\s\ a\s\ a\s\ a\s\ a\s\ a

	Earring has crack and burr	4、耳环断裂;	
	5、耳环衬套磨损量达原厚的	Earring rupture	
	50% The abrasion of earring's	5、受力情况不良。	
	lining reaches 50% thickness	Bad strained condition	
4回444星			<b>紫奶 针结点正体用 紫纱</b>
钢丝绳	断丝、断股、打结、磨损	导致突然断绳 Cause to break	断股、打结停止使用;断丝,
wire	Thread break, bundle break, knot		按标准更换;磨损,按标准
rope	and abrasion		更换 Stop to use it when
			wire rope break and knot;
			Replace when thread break,
			and replace the wire rope
			when it have abrasion.
	1、滑轮绳槽磨损不匀;	1、 材质不均匀、安装不合要	1、轮槽壁磨损量达原厚度
	Uneven abrasion of block's	求,绳和轮接触不良;	的 1/10, 径向磨损量达绳径
滑轮	groove	Material asymmetry, bad	的 1/5 时应更换;
Pulley	2、滑轮转不动;	installation and bad connection	We should replace it when
	Pulley cannot turn	of rope and block	abrasion of groove's wall
	3、滑轮倾斜、松动;	2、轴损坏或轴承损坏; shaft	reaches 1/10 previous
	Pulley incline and loose	abrasion and bearing abrasion	thickness, and gauge ware
	4、滑轮裂纹或轮缘断裂。	3、轴上定位件松动,或钢丝	reaches 1/5 of wire rope
	Crack of pulley or break of wheel	绳跳槽; keeper of shaft loose	diameter
	flange	or wire rope hop out of groove	2、更换轴和轴承并加强润
		4、滑轮损坏。Pulley abrasion	滑, 检修; Replace the shaft
			and bearing and then
			lubricate them and more
			maintenance.
			3、紧固轴上定位件,对钢
			丝绳跳槽进行检修; Fasten
			the keeper and repair the
			wire rope's hopping.
			4、更换 replace
	1、卷筒疲劳裂纹; Drum fatigue	1、卷筒破裂; break of drum	1、更换卷筒; Replace it
卷筒	crack	2、轴被剪断,导致重物坠落;	2、停止使用,立即对轴键
Drum	2、卷筒轴、键磨损; Abrasion of	Break of shaft and cause the	等检修; Stop using it and
	drum's shaft and pin	fall of load	inspect the shaft immediately
	3、卷筒绳槽磨损和绳跳槽,磨	2、卷筒强度削弱,容易断	3、更换卷筒。
	损量达原壁厚的 15%~20%。	裂;钢丝绳缠绕混乱。	Replace the drum
	Groove abrasion and rope	The intensity of drum becomes	
	hopping. The abrasion reaches	weaker and easy to break. And	
	15%-20% of the thickness	wire rope are twisted	
	1	1	1

	1、齿轮轮齿折断; Gear teeth	1、工作时产生冲击与振动,	1、更换新齿轮; Change gear
	break	继续使用损坏传动机构;	2、更换新齿轮; Change gear
齿轮	2、齿轮磨损达原齿厚的	When working will cause	3、对起升机构应作更换,
Gear	15%~20%; abrasion of gear	impact and vibration and then	对运作机构等作修补;
	reaches the 15%-20% of the	damage the transmission	Replace the lifting
	thickness	mechanism	mechanism and repair the
	3、齿轮裂纹; crack of gear	2、运转中有振动和异常声	traveling mechanism.
	4、因"键滚"使齿轮键槽损坏;	   响,是超期使用,安装不正	4、对起升机构应作更换,
	Abrasion of gear groove due to	确所致; Vibration and noise	对运行机构可新加工键槽
	the rolling of key	caused by overtime use and	修复;
	5、齿面剥落面占全部工作面积	improper installation	Renew the key
	   的 30%,及剥落深度达齿厚的	3、齿轮损坏;Gear damage	5、 更换: 圆周速度>8m/s
	   10%;渗碳层磨损 80%深度。	4、使吊重坠落; Load fall off	的减速器的高速级齿轮
	Flack section reaches 30% of the	   5、超期使用,热处理质量问	磨损时应成对更换。
	working area. And the depth	题。	Replace: for the reducer its
	reaches 10% of the thickness. And	Overtime use and bad heating	rim speed >8m/s, when there
	carburized layer abrasion reaches	treatment.	is some abrasion of the gear,
	80% of the thickness.		we must replace it.
	1、裂纹; Crack	1、材质差,热处理不当,导	1、更换; replace
	2、轴弯曲超过 0.5mm/m; Curving	致损坏轴; Bad material,	2、更换或矫正; replace or
轴 shaft	of shaft is more than 0.5mm/m	improper heat treatment cause	rectify
	3、键槽损坏。Groove of key	the damage of shaft	3、起升机构应作更换,
	abrasion	2、导致轴颈磨损,影响传动,	<b>运行</b>
		产生振动; Cause damage of	机构等可修复使用。
		shaft and influence the	Replace the lifting mechanism
		transmission and bring	and repair the traveling
		vibration	mechanism
		3、不能传递扭矩。Unable to	
		transmit torsion	
	1、踏面和轮辐轮盘疲劳裂纹;	1、车轮损坏;Abrasion of	1、更换; Replace
	Foot surface and wheel spider	wheel	2、成对更换; Replace in
车轮	have fatigue crack	2、导致车轮啃轨,车体倾斜	pairs
wheel	2、主动车轮踏面磨损不均匀;	和运行时产生振动; The	3、更换; Replace
	Uneven abrasion of drive	wheel nibble the rail and the	4、更换。Replace
	wheel surface	crane incline and bring	
	3、踏面磨损达轮圈厚度的 15%	vibration when traveling.	
	Abrasion of wheel surface reaches	3、车轮损坏;	
	15% of wheel thickness;	Abrasion of wheel	
	4、轮缘磨损达原厚度的 50%。	4、由车体倾斜、车轮啃轨所	
	Wheel flange abrasion reaches	致,容易脱轨。Due to the	

	50% of the previous thickness.	crane incline and wheel nibble	
		the rail and it is easy to bring	
		digression	
	1、拉杆上有疲劳裂纹; Fatigue	1、制动器失灵; No work of	1、更换; Replace
	crack on lever	break	2、更换; Replace
制动器	2、弹簧上有疲劳裂纹;	2、制动器失灵; No work of	3、更换; Replace
零件	Fatigue crack on springs	break	4、重新车削、热处理,车
break	3、小轴、心轴磨损量达公称直	3、抱不住闸; Cannot break	削后保证大于原厚度的
part	径的 3%~5%; The abrasion of	4、吊重下滑或溜车; Load fall	50%以上。起升机构中制动
	minor shaft and mandrel reaches	off and crane slide	轮磨损量达 40%应报废;
	3%-5% nominal diameter	5、制动器失灵。Bad break	Re-turning and heat
	4、制动轮磨损量达 1~2mm,或		treatment, but the thickness
	达原轮缘厚度的 40%~50%;		is more than 50% of the
	The abrasion of break wheel		previous thickness. Do not
	reaches 1-2mm, which is		use it when the abrasion of
	40%~50% of the previous		break wheel is more than
	thickness		40% of the thickness.
	5、制动瓦摩擦片磨损达 2mm 或		5、更换摩擦片。Replace the
	者达原厚度的 50%。The abrasion		rubbing tile
	of break tile reaches 2mm, which		
	is 50% of the previous thickness		
联轴器	1、联轴器半件内有裂纹;	1、连轴器损坏; Damage	1、更换; Replace
Couplin	Crack on coupling	2、起制动时产生冲击与振	2、对起升机构应更换新件,
g	2、连接螺栓及销轴孔磨损;	动、螺栓剪断、起升机构中	对运行等机构补焊后扩孔;
	Abrasion in connection bolts and	则易发生吊重坠落; When	Replace parts to the lifting
	pin hole	breaking it causes impact and	mechanism, and overlaying
	2、 齿形联轴器齿轮磨损或折	vibration. The bolt breaks off	welding for the traveling
	断;	and the loads fall off.	mechanism and then larger
	Coupling gear abrasion and break	3、缺少润滑、工作繁重、打	the hole
	4、键槽压溃与变形; Groove	反车所致联轴器损坏;	3、对起升机构,轮齿磨损
	distortion 5、销	Lack of lubrication, heavy	达原厚 15%即应更换。
	轴、柱销、橡皮圈等磨损。	duty etc.	对运行机构,轮齿磨损
	Abrasion in shaft, pin and rubber	4、脱键、不能传递扭矩; Can	量达原齿厚的 30%时更
	etc.	not transmit the moment of	换;
		torsion	For the lifting
		5、启、制动时发生强烈的冲	mechanism, when the
		击与振动。Have impact and	abrasion of gear teeth
		vibration when starting and	reaches 15% the
		breaking.	thickness, replace it ,and
			for the traveling
-			

			mechanism, the abrasion
			of gear teeth reaches
			30% the thickness,
			replace it.
			4、对起升机构应更换,对
			其他机构修复使用; Replace
			the lifting mechanism and
			repair other mechanism.
			5、更换已磨损件。Replace
			the worn parts.
	1、温度过高;High temperature	1、润滑油污垢完全缺油或油	1、清除污垢,更换轴承,
滚动	2、异常声响(继续哑音);	过多;	检查润滑油数量; Clean and
轴承	Abnormal noise	Lack of oil or too much oil	replace the bearing. Check
Rolling	4、金属研磨声响; Noise of	2、轴承污脏; Bearing fouling	the lubrication.
bearing	grinding	3、缺油; Lack of oil	2、清除污脏; Clean the
	4、锉齿声或冲击声。Noise of	4、轴承保持架、滚动体损坏。	fouling
	filing teeth and impacting	Damages on supporter of	3、加油;Add oil
		bearing and roller	4、更换轴承。Change the
			bearing
		1、轴承偏斜或压得过紧;	1、消除偏斜, 合理紧固;
滑动轴承	过渡发热 over heat	Skewness of bearing and Press	Get rid of skewness and
Sliding		tightly	fasten properly
bearing		2、间隙不当; Improper	2、调整间隙;Adjust
		clearance	clearance
		3、润滑剂不足; Lubrication	3、加润滑油; Add
		shortage	lubrication
		4、润滑剂质量不合格。	4、换合格的油剂。Use good
		Lubrication in bad quality	lubrication

### 表 6-3 桥式起重机故障及排除

Table 6-3 Faults and eliminating method of overhead crane

故障名称 name	故障原因 reason	排除方法 eliminating
		methods
	1、杠杆的铰链被卡住; Gemel of	1、排除卡住故障,润滑;
	lever is locked.	Eliminate the fault and lubricate
	2、制动轮和摩擦片上有油污;	it
不能闸住制动轮	Break wheel and tile have fouling.	2、清洗油污; Clean the fouling
(重物下滑)	3、电磁铁芯没有足够的行程;	3、调整制动器;Adjust the break
Cannot break	Magnetic moving distance too	4、更换摩擦片; Change the
(load slide off)	short	friction tile

制		4、制动轮或摩擦片有严重磨损;	5、更换主弹簧或锁紧螺母;
		Serious abrasion of braking wheel	Change the spring and fasten the
		and friction	bolts
		5、主弹簧松动和损坏; Main	6、紧固锁紧螺母; Fasten the
		spring loose or damage	bolts
		6、锁紧螺母松动、拉杆松动;	7、检修推动机构电气部分。
动		Fasten nut loose or push bar loose	Inspect the electric part of push
		7、液压推杆制动器叶轮旋转不	bar
		灵	
		Push bar cannot rotate	
		smoothly	
	制动器不松闸	1、电磁铁线圈烧毁; Magnetic	1、更换; Change
	Break cannot loose	wire burn	2、接好线; Connect the wire
器		2、通往电磁铁导线断开;	3、用煤油清洗; Clean with
break		Disconnection of wire to	kerosene
		magnetic iron	4、消除卡住现象、润滑;
		3、摩擦片粘连在制动轮上; Shoe	Eliminate the lock and lubricate
		block on braking wheel	it
		4、活动铰被卡住;Gemel stock	5、调整主弹簧力;Adjust the
		5、主弹簧力过大或配置太重;	main spring
		Main spring over pressed	6、顶杆调直或更换顶杆;
		6、制动器顶杆弯曲,推不动电	Straighten the mandril or change
		磁铁 (在液压推杆制动器上);	the mandril
		Push bar inflected ,can not move	7、按工作环境温度更换油液;
		the magnetic iron(hydraulic push	Change oil according to
		bar break)	working condition
		7、油液使用不当; Improper oil	8、调整推杆机构和检查电器部
		fluid	分;
		8、叶轮卡住; Impeller locked	Adjust push bar and check the
		9、电压低于额定电压 85%, 电	electric part.
		磁铁吸合力不足。85% lower	9、查明电压降低原因,排除故
		than the rated voltage. Not	障。
		enough magnets.	Find out the reason, eliminate
			the obstacle
		1、闸瓦在松闸后。没有均匀的	
		和制动轮完全脱开,因而产生摩	1、调整间隙; Adjust clearance
	制动器发热,摩擦片发出	擦; Shoe can't fully disengage	2、调整间隙; Adjust clearance
	焦味并且磨损很快	braking wheel when break loose,	3、更换或修理辅助弹簧;
	Break overheat, brake-shoe	so bring friction.	Replace or repair the spring
	burnt and a lot of abrasion	2、两闸瓦与制动轮间隙不均匀,	4、按要求车削制动轮表面。

		或者间隙过小; Asymmetrical	Turning the surface of brake
		distance from brake shoe to	according to requirements.
		braking wheel.	8 1
		   3、短行程制动器辅助弹簧损坏	
		或者弯曲;	
		Assistant spring of short traveling	
		break is damaged or bent.	
		   5、制动轮工作表面粗糙。	
		Rough surface of break wheel	
	制动器容易离开调整位	1、调节背紧螺母没有拧紧;	1、拧紧螺母; Fasten the nut
	置,制动力矩不够稳定	The nut of adjusting is loose	2、更换。Replace it.
	The break is easy to	2、螺纹损坏。The screw thread is	•
	deviate from the adjusted	damaged	
	place. And the breaking	_	
	moment is not steady.		
	电磁铁发热或有响声	1、主弹簧力过大;Main spring	1、调整至合适大小;Adjust
	Iron overheat or big noise	over pressed	main spring properly
		2、杠杆系统被卡住。Push bar is	2、消除卡住原因、润滑。
		blocked.	Eliminate the block and make
		3、衔铁与铁芯贴合位置不正确,	lubrication
		Keeper and iron core are	3、刮平贴合面 Make the joint
		improperly jointed	place smooth.
	有周期性齿轮颤动现象,	节距离误差过大, 齿侧间隙超差	修理、重新安装
	从动轮特别明显	Error of distance is too big	Repair or re-install
	The idle wheels have		
	obvious cyclic vibration		
减	1、 剧烈的金属摩擦声,	1、传动齿轮侧隙过小,两个齿	
	减速器振动,机壳叮	轮轴不平行、齿轮有尖锐的刃	1、修正、重新安装; Mending or
	当作响;	边;	re-install
	Big grating, and vibration	Gap of transmission gears too	2、更换齿轮。Replace the gear
速	of reducer, noise on cover	small,non-parallel gears, sharp	
	too.	gears	
	2、齿轮啮合时,有不均匀	2、轮齿工作面不平坦,齿面有	
	的敲击声, 机壳振动。	缺陷、轮齿不是沿全齿面接	
器	Knocks of gear	触,而是在一角上接触。	
Reducer	joggling, vibration of	Rough working face of gear And	
	machine cover.	defectiveness of gear working	
		face.	
	壳体,特别是安装轴承处	1、轴承破碎;Bearing is crashed	1、更换轴承; Replace the
	发热 The cover especially	2、轴颈卡住; Axle journal is	bearing

	where the bearing is stalled	blocked	2、更换轴承; Replace the
	is overheat.	3、轮齿磨损; Abrasion of gear	bearing
		teeth	3、修整齿轮; Finish the gear
		4、缺少润滑油。Shortage of	4、更换润滑油。Add lubricating
		lubrication oil.	oil
	   剖分面漏油	1、密封失效; No longer hermetic	1、更换密封件; Replace oil
	Leak of oil	2、箱体变形; Box inflected	seals
	Leak of on	3、剖分面不平; Some surface not	<sup>3cans</sup>   2、检修箱体剖分面,变形严重
		flat	则更换; Check box, replace it
		11dt   4、连接螺栓松动。Connection	when heavy damaged.
		bolt loose	when heavy damaged. 3、剖分面铲平; flatten the
		boil loose	Surface
			4、清理回油槽,紧固螺栓。 Clean the return chute, and
			fasten the nuts
			_
	减速器在底座上振动	1、地脚螺栓松动; Feet bolts loose	1、调整地脚螺栓;Adjust feet 
	Vibration of reducer's base	2、与各部件连接轴线不同心;	bolts
		Non-concentricity of all parts	2、对线调整; Adjust
		3、底座刚性差。Bad rigidity of	cater-corner
		base	3、加固底座,增加刚性。
			Reinforce the base and add the
			rigidity
	減速器整体发热 Overheat	润滑油过多 Too much lubrication	调整油量 Adjust the quantity of
	of reducer	oil	oil
钢		1、滑轮和卷筒直径太小; Small	
<u>44</u>	钢丝绳迅速磨损或经常损	diameter of wheel and drum.	加大滑轮或卷筒的直径;
绳	坏 Wire rope abrasion and	2、卷筒上绳槽尺寸绳径不相匹	Replace wire ropes. Use bigger
滑	damage	配,太小;	wheel or drum.
轮		The wire rope does not match	2、更换起吊能力相等,但直径
系		with the groove of drum. 3、有脏	较细的钢丝绳,或更换滑轮及
统		物, 缺润滑; Smeary or lack of	卷筒;
Wire-rop		lubrication	Use thinner wire-rope but with
e and		4、起升限位挡板安装不正确,	same capacity, or change
sheaves		经常磨绳;	sheaves and drum. 3、清除、
		Lifting limit grind the rope 5、滑	润滑; Clean or lubricate
		轮槽底或轮缘不光滑,有缺陷。	4、调整。Adjust
		Groove not smooth	
	个别滑轮不转动	轴承中缺油、有污垢和锈蚀	润滑、清洗
	Some wheel cannot rotate	Lack of oil, smeary or rusty.	Lubricate and clean

#### 表 6-4 桥式起重机故障及排除(大小车运行机构)

Table 6-4 Faults and eliminating method of overhead crane (Traveling mechanism of crane and trolley)

故障名	称 Name	故障原因 Fault	排除方法 Eliminating Methods
起		1、两主动车轮直径误差过大;	1、测量、加工、更换车轮; Measure,
重		Different diameter of two main wheel	machining or replace wheel
机		2、主动车轮不是全部和轨道接触;	2、把满负荷小车开到大车落后的一端,
大		Main wheel do not touch the rail	如果大车走正,说明这端主动轮没和轨
车	桥架歪斜运	overall fully.	道全部接触,轮压小。可加大此端主动
运	行、啃轨	3、主动轮轴线不正; Improper axes	车轮直径;
行	Bridge	4、金属结构变形; Inflection of steel	Bigger the diameter of small wheel
机	deflection,	structure	3、检查和消除轴线偏斜现象;
构	gnawing rail	5、轨道安装质量差;Bad quality of	Check and eliminate the decline
Travelin		rail installation	4、矫正; Rectify
g		6、轨顶有油污或冰霜。Rail top	5、调整轨道,使轨道符合安装技术条件;
mechani		smeary or frost	Adjust the rail according to installation
sm of			requirements
crane			6、消除油污和冰霜。Clean the smeary and
			frost
小		1、轨顶有油污等; Smear on the top	1、清除; Clean it
车		of rail	2、调整轮压;Adjust the wheel load
运	打滑	2、轮压不均; Uneven wheel load	3、调整轨道至符合技术条件; Adjust the
行	Slippery	3、同一截面内两轨道标高差过大;	rail according to requirements
机		Big difference between two rail's	4、改善电动机启动方法,选用绕线式电
构		height.	动机。Better starting method, use winding
Travelin		4、启、制动过于猛烈。Violent start	motor
g		and break	
mechani	启动时车身扭	1、 小车轮压不均或主动车轮有一	1、调整小车三条腿现象;Adjust
sm of	摆 Crane sway	只悬空;	the wheel
trolley		Uneven wheel load or one of the	2、解决啃轨。Eliminate the gnawing
		main wheels hangs in the air	
		2、啃轨。Gnaw the rail.	

### 2、 桥式起重机电气设备部分故障及排除(表 6-5,表 6-6)

Overhead crane electrical parts' faults and eliminating methods

#### 表 6-5 桥式起重机电气设备部分故障与排除

Table 6-5 Overhead crane electrical parts' faults and eliminating methods

故障名称 name   故障原因 reasons	排除方法 eliminating methods
--------------------------	--------------------------

	整个电动机均	1、接电率(JC%)加大,引起过载;	1、减低起重机繁重程度或更换
	匀过热	Overload due to heavy JC%.2、在低电压	JC% 相应电动机; lower the
	Overheat of the	下工作; Working in low voltage	load ,replace with a proper motor
	whole motor	3、电动机选择不当;Use the improper	2、电压低于 10%额定电压、停
		motor	止工作;
		4、检修后改变了起重机性能参数。	Stop working when 10% lower
交		Changed the parameter after inspection	the rated voltage 3、选择合适电
流			动机;
电			Use proper motor 4、维修,保持
动			起重机设计参数。Maintenance,
机			keep the designed parameter
AC	定子局部过热	定子硅钢片之间局部短路 Partial short of	消除引起短路的原因, 用绝缘漆
Motor	Part of the	stator's silicon steel tile	抹在修理的地方 Eliminate the
	stator overheat		short, coated the repaired part
			with insulated lacquer.
	定子绕组局部	1、接线错误; Connection fault	1、检查并排除接线错误; Check
	过热 winding	2、某相绕组中的两处,与外壳短路;	and eliminate the fault
	part of stator	Short due to two winding points with the	2、修复某相绕组。Repair the
	overheat	cover	Windings
	转子温度升	1、绕组端头、中性点或并联绕组间接接	1、检查焊接处,消除缺陷;
	高,定子有大	触不良; Bad connection between winding	Check the welding, and eliminate
	电流冲击, 电	end, neutral or parallel windings	the faults
	动机在额定负	2、绕组与滑环间接触不良; Bad	2、检查连接状况; Check the
	荷时不能达到	connection between winding and slide	connection
	全速 Rotor	rings	3、检查调整电刷器械; Adjust the
	overheat, stator	3、电刷器械中有接触不良处;	electric brush
	heavy current	Bad connection between some electric	4、检查松动与接触不良的情况
	impact, motor	brush	并修理;检查电阻,断裂的更换。
	cannot reach	4、转子电路中有接触不良。Bad	Check whether it is loose and the
	full speed with	connection between some rotor loop	condition of bad connection.
	rated load.		Check the resistance and change
			the burnt one.
	电动机在工作	1、电动机轴和减速器轴不同心;	1、重新对线安装; Re-installation
	时振动 Motor	Non-concentricity of motor and reducer's	2、更换轴承; Change the bearing
	vibrates when	axis.	3、检修。Inspect
	working	2、轴承损坏和磨损;Damage and abrasion	
		on bearing	
		3、转子变形。Deformation of stator	
	电动机工作时	1、定子相位错移;	1、检查接线并改正; Check
	发出不正常的	Stator wrong position	connection and rectify

声响 Motor	2、定子铁芯压紧; Stator impact	2、检查定子并修理; Check and
makes	3、轴承磨损; Abrasion of bearing	repair stator
abnormal noise	4、槽楔子膨胀。Groove wedge expands	3、更换轴承; Replace bearing
		4、锯掉膨胀的楔子或更换
		Saw off expanded wedge or
		replace
电动机有承受	1、转子端部连接处发生短路; short on	1、检查并消除短路现象;
负荷后转速变	rotor end	Eliminate short circuit
慢 Rotating	2、转子绕组有两处接地。Rotor loop	phenomenon2、检查每匝线圈,
speed becomes	grounding	修理破损,消除短路。
slower with		Check loop, repair the break and
load		eliminate short
电动机运行时	1、轴承端部连接处发生短路; Short on	1、更换失效轴承;检查端盖的
定子与转子摩	bearing connection	位置;清除定子、转子铁芯上的
擦 Stator rubs	2、转子绕组的线圈连接不正确, 使磁通	飞刺; Change the invalid bearing,
with the rotor	不平衡。Improper winding and unbalance	check the cover; eliminate the
when motor	of the magnet	abnormal thing on stator and iron
working		core of stator.
		2、检查并使线圈接线正确,测
		定子每相中的电流应相等。
		Check the loop and make sure it is
		in proper way. Test the stator and
		make every phase has equal
		currency.
电动机工作时	1、电刷研磨不好;Bad grinded brush	1、磨好电刷; Better the brush
电刷上冒火花	2、电刷在刷握中太松; Brush is too loose	2、调整电刷或研磨合适; Adjust
或滑环被烧焦	3、电刷及滑环污脏; Brush and slide ring	the brush, or properly grind it.
Spark on motor	are smeary	3、用酒精将滑环擦干净; Clean
carbon brush or	4、滑环不平,造成电刷跳动;	the slide ring with alcohol.
slide ring burnt	Slide ring is not plat, and cause the	4、车削和磨光滑环; Turning and
	hopping of brush.	grinding the slide ring.
	5、电刷压力不足; No enough press on the	5、调整电刷压力(18~20KPa);
	brush.	Adjust the pressure of brush
	6、电刷牌号不对;Improper brush	(18~20KPa)
	7、电刷间电流分布不均匀。Uneven	6、更换;Replace it
	currency between brushes.	7、检查刷架馈电线及电刷,并
		矫正。
		Check feeding wire and brush,
		and rectify them.
滑环开路 slide	滑环与电刷器械脏污	清污除垢 Clean the smear.
	İ	i .

	ring open	Slide ring and brush are smeary	
	circuit		
	线圈过热 The	1、电磁铁吸力过载;Magnetic iron	1、调整弹簧拉力; Adjust the
交	loop overheat	overload.	spring
流		2、磁流通路的固定部分与活动部分之间	2、消除间隙; Eliminate the gaps
电		存在着间隙;Fixed part and stationary	3、更换线圈,或改变接法。
磁		part of close circuit cannot touch.	Replace the loop and change the
铁		3、线圈电压与电网电压不相符合。I	connection way.
alternating		Improper voltage of loop and network.	
electromagn	工作时声响较	1、电磁铁过载; Magnetic iron overload	1、调整弹簧;Adjust the spring
et	大	2、磁流通路的工作表面上有污垢;	2、消除污垢; Eliminate the smear
	Big noise when	Loop surface have smear.	3、调整制动器机械部分,消除
	working	3、磁力系统偏斜。Declination of magnetic	偏斜
		system	Adjust the mechanical part and
			eliminate the declination.
	不能克服弹簧	1、电磁铁过载; Magnetic iron overload	1、2、调整制动器主弹簧力;
	作用力 Cannot	2、主弹簧力过大; Bigger spring	Adjust the main spring of break.
	overcome	3、电网中电压低。Low voltage of net	3、暂停工作。Stop working
	spring action	work	
交	线圈发热 loop	1、线圈过载; loop overload	1、减小活动触头对固定触头的
流	heating	2、磁流通路的活动部分接触不到固定部	压力; Reduce pressure which the
接		分。Fixed part and stationary part of close	moving touching points produce
触		circuit cannot touch	to fixed touching points.
器			2、消除偏斜、卡塞、污垢或更
和			换线圈。Eliminate declination,
继			block, smeary and replace the
电			loop.
器	接触器嗡嗡声	1、线圈过载; Loop overload	1、减小触头压力; Reduce the
AC	增高 Bigger	2、磁流通路表面上污垢;Loop surface	pressure of touching point
contactor	noise of	have smear	2、消除脏污; Clean the smear
and relay	contactor	3、磁力通路自动调整系统中卡塞现象。	3、消除卡塞。Eliminate the block
		Self-adjusting system of magnetic loop is	
		blocked	
	接触器发热或	1、触头压力不足; Not enough pressure of	1、调整压力; Adjust the pressure
	烧毁(损)	touching point	2、排除或更换。Eliminate or
	Contactor	2、触头脏污。Smeary touching point	replace
	overheat or		
	burnt		
	主接触器不能	1、闸刀开关没合上,紧急开关没合上;	1、2、闭合开关; Close the switch
	接通	Knife switch open, emergency switch	3、手柄回零; Put the controller to
L	1	L	<u> </u>

	Main contactor	open	zero.
	cannot switch	2、仓口开关没合上; Door switch open	4、检查或者更换熔断器; Check
	on	3、控制器手柄没放回零位;The controller	or replace the fuse
		is not put to zero.	5、检查线路有无电压。Check the
		4、控制电路熔断器烧断; Control circuit	voltage of the wire.
		breaker burnt	
		5、线路无电。No current	
	起重机运行中	1、触头压力不足; Low contact pressure	1、调整触头压力; Adjust the
	经常掉闸	2、触头烧损;Touching point burnt	pressure of touching point.

控制器合上后电动机仅能单向 1、控制器反向触头接触不好或控 5 th
控制器合上后电动机仅能单向
转动 Motor can only run in one direction制转动机构有故障; Controller's reversal contactor point cannot work well or some wrong with the rotor mechanismcontroller and adjust the touching point 2、用短接法找出故障并消除; Find out the fault and eliminate with the methods of short-circuit. 3、工作机构运动到极点,压开了 限位开关; Break the limit when working mechanism travel to the end.次、只能单方向运转时,将故障排 除; Eliminate the fault when it run in one direction
reversal contactor point cannot work well or some wrong with the rotor mechanism  2、用短接法找出故障并消除; Find out the fault and eliminate with the methods of short-circuit.  3、工作机构运动到极点,压开了限位开关; Break the limit when working mechanism travel to the end.  Eliminate the fault when it run in one direction
well or some wrong with the rotor mechanism  2、用短接法找出故障并消除; Find out the fault and eliminate with the methods of short-circuit.  3、工作机构运动到极点,压开了限位开关; Break the limit when working mechanism travel to the end.  2、用短接法找出故障并消除; Find out the fault and eliminate with the methods of short-circuit.  3、只能单方向运转时,将故障排除; Eliminate the fault when it run in one direction
mechanism  2、配电线路发生故障; Electric fault  3、工作机构运动到极点,压开了 限位开关; Break the limit when working mechanism travel to the end.  out the fault and eliminate with the methods of short-circuit.  3、只能单方向运转时,将故障排除; Eliminate the fault when it run in one direction
2、配电线路发生故障; Electric faultmethods of short-circuit.3、工作机构运动到极点,压开了3、只能单方向运转时,将故障排除;限位开关; Break the limit when working mechanism travel to the end.Eliminate the fault when it run in one direction
3、工作机构运动到极点,压开了限位开关; Break the limit when working mechanism travel to the end.3、只能单方向运转时,将故障排除;Understand the properties of the limit when working mechanism travel to the end.Eliminate the fault when it run in one direction
限位开关; Break the limit when working mechanism travel to the end. 除;  Eliminate the fault when it run in one direction
限位开关; Break the limit when working mechanism travel to the end. 除;  Eliminate the fault when it run in one direction
end. one direction
4、限位开关发生故障。Fault in limit   4、检查限位开关,消除故障。Check
switch the limit switch, and eliminate the
fault.
终点限位开关动作后,主接触 1、终点开关电路中发生短路; Short 1、检修,消除短路; Inspect and
器不释放 Contactor fail after of end switch eliminate the short
limit switch open 2、接至控制器的导线错乱。Wiring 2、纠正配线错误。Rewire
fault
控制器工作时发生卡塞和冲击 1、定位机构发生故障; Limit fault 1、消除故障; Eliminate the fault
Tuck and bump when controller 2、触头撑住于弧形室内。 2、调整触头位置。Adjust the
working Contactor point located in location of touching points
camber
运行中控制器扳不动 1、定位机构故障; Limit fault 1、调整压力; Adjust the pressure
Controller can not pull when 2、触头烧灼粘接。Touching points 2、清洗触头。Clean the touching
working are burnt together. points
发电机不激磁 Motor can not 1、激磁回路断线; Excite loop-line 1、检查激磁回路; Check the excite
excite break loop
2、发电机转向相反。Motor rotating 2、调换驱动电动机转子两相接线;
oppositely Change the wiring two phase of
driving motor's stator
电源切断后(控制回路分断) 1、控制回路中有接地或短路之处; 1、检查出接地或短路,排除故障;
保护箱接触器不掉闸 Control loop-line grounding or short; Find out grounding and short,
Protective contactor failure after 2、接触器触头焊住,对主回路继 eliminate the faults.
power off 续供电。Weld the contactor, supply 2、锉削烧焦的触头,使接触良好。

the electricity for loop.	File the burnt contactor point,
	better the connection.

### 三、起重机的使用须知 Operation notice for crane

- (一) 安全技术规则 Technical rules for crane
- 1、使用起重机必须遵守的安全技术规则: Technical rules for safety that must be abided in applying of the crane
  - ①应有专职人员来操纵起重机。

The crane should be operated by special person(s).

②起重机侧面,必须挂上注明起重机的最大起重量、跨度、工作级别、制造厂的标牌。

A label plate showing maximum hoisting weight, span, working system and manufacturer must be hung on the flank of the crane.

③起重机工作的时候,除操纵室外,其余地方不准站人。

During the operation, person(s) can stay no where on the crane except the control cabin.

④在起重机上进行监测或修理时,起重机必须断电。

When inspection or maintenance is being carried out on the crane, the power must be cut off.

⑤起重机不带重物运行时, 吊钩离地 2.5 米 (即超过一个人的高度)。

When the crane is traveling without heavy load, the hook should be 2.5m from the ground(above one person's height).

⑥严格禁止起重机在搬运重物时,重物从人头上越过。

It is strictly forbidden for the crane traveling across the head of person with heavy load.

⑦起重机带重物运行时,重物最低点离重物运行线路上的最高障碍物至少 0.5 米。

When crane travels with heavy load, the lowest point must be 0.5m higher than the tallest objects on the way.

⑧严格禁止用吊钩运送或起升人员。

It is strictly forbidden to lift or transport person(s)

⑨禁止用任何方法从起重机上抛下物品。

Throwing object from crane is forbidden.

⑩工具、备品、紧固件、杂物等必须贮存在专门的箱子内,禁止随便放在起重机上,以避免物件落下时发生人身或损坏设备事故。

Objects like tools, spare parts, fastener and sundries must be kept in the special box. It is forbidden to put them on the crane in order to avoid any injury or harm to equipment or human body.

①起升液态金属、有害液体及重要物品时,不论重量多少,必须先稍微起升重物离地 150~200 毫米,验证制动器的可靠性以后再正常起升工作。

When hoisting liquid metal, harmful liquid or important object, no matter it is heavy or light, it must be lifted 150~200mm from the ground first, validate the reliability of the brake and then start normal operation.

(12)禁止将易燃物品(如煤油等)贮放在起重机上,做好起重机上的防火工作。

Forbid to store flammable material (such as kerosene)on the crane for fireproofing.

(13)露天使用的起重机,当风力大于六级时停止工作。

Crane being applied outdoor should stop working when wind is stronger than Grade 6

(4) 露天起重机不工作时,必须设法将起重机可靠固定(如吊钩挂上地锚、车轮处塞斜铁等),以防起重机被风刮走发生意外事故。

When the crane outdoor stays off working, it must be reliably fastened (for example, link the hook to ground anchor and put blocks to the wheels) in order to prevent accident.

(15)必须对起重机进行定期的安全检查,其中包括用试验荷重对起重机进行静负荷和动负荷的试验,将结果存入设备档案。

Crane must be regularly checked for sake of safety, including dead load test and dynamic load test. The record should be kept in file.

①起重机在使用期间,需注意观察轨道和车轮接触面应保持不锈蚀,且接触良好,避免因锈蚀产生火 花。

Pay attention to the rails and contacting surface of wheels in working time. They should keep rustless and contacting well and so avoiding any spark occurring.

②起重机在工作和运行中,严禁吊钩组与其他物体碰撞,以避免产生火花。

Hitting hook group with other objects is absolutely forbidden during operating or moving in order to avoid spark occurring.

- 3、电气设备检修安全技术规则: Safety technical rules for maintenance of electric equipments
- ① 只许专职的电气人员担任起重机电气的维修工作。

Only professional electrical technicians are permitted for maintenance of electric equipments.

②修理时,必须采用电压在36伏以下的携带式照明灯。

Only pocket light under 36 volt can be used during maintenance.

③当须带电工作时,一定要带戴上橡胶手套,穿上橡胶靴并使用有绝缘手柄的工具。应有专人监护电器开关,一旦发生危险时应立即切断电源,所有靠近导电部分的地方都必须用栅栏围起来。

If it is necessary to do the maintenance with power on, rubber gloves and rubber shoes must be worn and tools with insulated handle must be used. The switch must be watched by special person and the power should be cut off immediately in case there is any danger. Barrier must be set up to separate those parts that may bring electricity.

④电动机、电气设备外壳上的所有金属部分可能发生导电的地方必须接地。

The metal shell of the electromotor and electrical equipment and other metal parts should be earthed.

①电机电器在维修需要开盖时,注意保护隔爆面,安装前涂 204—1 防锈油。

When it needs to open the cover of motor or electric equipment for maintenance, carefully protect the separating side and paint 204-1 rust-preventative oil before resetting.

②维护时所使用的工具为防爆工具,避免拆装或敲击产生火花。

Tools for maintenance are explosion-proof in order to avoid spark occurring.

#### (二) 司机职责Duties of the operator

1、熟悉起重机的用途。设备、操作方法以及保养规则。

Be familiar with the function of the crane, the method of operation and maintenance rules.

- 2、严格遵守安全技术规则。Strictly abide by the safety technical rules.
- 3、起重机开始操作前应做到: Following steps should be done before operating the crane
- ①了解电源供电情况,电源电压(大车导电器间电压)低于额定值的90%时不应开动起重机。

Check condition of power supply, the crane will not be started when the voltage of power supply is under 90% of the rated value.

②在总刀开关断开的情况下进行起重机的检视工作,检查主要部分的连接和使用情况,对个别机构进行必要调整。

Before turning on the power, check main parts of the crane to ensure the connecting and running parts in condition and make adjustment if necessary.

③检查起重机是否有遗留工具或其他物品,以免在工作时落下,发生人身或损坏设备事故。

Check if there are any tools or other goods left on the crane in order to avoid them dropping from the crane while working and thus making injury or damage to equipment or human body.

- ④按规定对设备的各润滑点加油。Oil the lubricating points according to the rules.
- ⑤对露天工作的起重机,不使用时应妥善作防风措施。For crane applied outdoors, take windproof measures when it stays off work.
- ⑥在主开关接电之前,司机必须将所有控制器的手柄转至零位,并将所有门关好。起重机工作时,严禁桥架和大车轨道上有人。

Before turning on the main switch, operator must turn all the controllers to zero position and close all the doors. During operating, there should not be persons on the bridge or on the rails.

⑦起重机在每次开动前,必须发出开车警告信号(电铃)。

Before every startup, warning alarm (electric bell) should be sent out.

- ⑧必须注意被吊起的重物,不得超过额定的起重量。The object hoisted should not be over the rated load.
- ⑨司机必须与挂钩工人紧密配合,步调一致。移动和起升重物,只应听从挂钩工人所发出的信号,但 "停车"信号不论由谁发出,均应停车。Operator must cooperate well with hook worker and only defer to hook worker's signal, but must stop the crane no matter who gives "stop" signal.
  - ⑩吊起重物时,必须在垂直的位置,不允许利用移动大车及小车拖动重物。

Object to be hoisted must be vertically under the hook. It is not allowed to drag the object by moving the crane or trolley.

们起重机及小车接近边缘位置时必须以最缓慢的行速,在不碰撞挡架的条件下,逐步靠近。

When the crane or trolley is reaching a end position, it must gradually reach the end at slowest speed without any hitting of the block.

②起重机的控制器应逐级开动,在机构完全停止运转前,禁止将控制器从顺转位置直接反到逆转位置来进行制动,但在防止事故发生的情况下可以偶尔用来作为紧急措施,但控制器只能打在反向一档而后必须检查确定机构部件没有损伤的情况下才能继续工作。

The controller should be started step by step. Before the mechanism completely stop, turning the controller from veering to reversing is not allowed, but in emergency situation, it can be used to avoid possible accident. In this situation, the controller can only be turned to first shift of the reverse, and the mechanism must be checked before next operation.

① 司机要保证防止与另一起重机相撞。在一台起重机发生故障的情况下,才能允许用相邻另一台起重机来推动这一台,在这种情况下两台起重机须无负荷,而且用最低的速度缓慢地移动。

Operator must assure that the crane will not run against another crane. Only in the situation that one fails to operate, can another comes pushes it. In this situation, both cranes should move at the slowest speed without any load.

4)在电压显著降低或电力输送中断的情况下,主刀开关必须断开,并将所有的控制器拉到零位上。

In the situation that voltage drops markedly or power is cut off, the main switch must be turned off and all controllers should be in zero position.

① 起重机的电动机突然停电或线路电压下降剧烈时,应将所有控制器拉到零位,司机室内总开关必须马上切断。司机即以信号通知挂钩工人。

When the motor's power is suddenly cut off or voltage of circuitry drops suddenly, all the controllers should be turned to zero position. The main switch in the cab should be turned off immediately and operator should notice the hook worker promptly.

(16)起重机吊有重物和下放吊具时,司机不得离开操纵室。

When hanging load or lowing downing load, operator is not allowed to leave from control cabin.

(17) 当起重机工作完毕以后,吊具应升到上面的位置,使控制器处在零位,并断开主刀开关。

Lift the hook on high position, put controller on zero position and turn off the main switch after finishing work.

(18)工作完毕后司机必须拉开总刀开关和断开电锁。

Operator must turn off the main switch and cut off electric lock after work.

均每班工作完后清扫和擦抹起重设备,再一次检查各部分情况,为下班作好必要的准备工作。

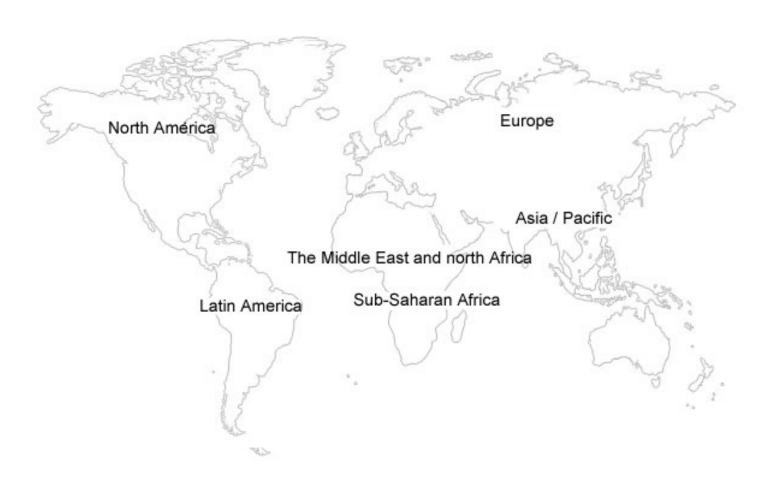

Clean and re-check the crane after finishing work. Make preparation for next work.

② 交接班时,当班司机将起重机交接纪录本一并交给当班司机,并将其中操作中所发现的问题,报告有关部门及接班司机。

When handing over the work, get the note book ready to the next operator, and report the problem found in operation to him and related department.

②1)司机在离开起重机时,起重机必须停放在规定的停车点并固定好。

When operator departs from the crane, the crane must be stopped on the given points and be fastened.
